

Trend Micro™ Anti-Spyware Enterprise Edition

Enterprise-class protection. Enterprise-class management.

Spyware Impacts Enterprises

According to IDC's 2005 Enterprise Security Survey results published in September, spyware is now considered to be the second-greatest threat to enterprise network security after viruses and worms. Undetected by traditional antivirus scanners, spyware can infiltrate system registries and memory and install hundreds of files and processes onto a client resulting in major system slowdowns, higher support costs, lost productivity, and the theft of confidential information. While consumer-based anti-spyware products lack true enterprise-class scalability, manageability, and flexibility, many enterprise security products sold today are less effective at spyware detection and cleanup. Large organizations plagued with spyware need a solution that gives them true enterprise-class protection and manageability now.

Trend Micro™ Anti-Spyware Enterprise Edition

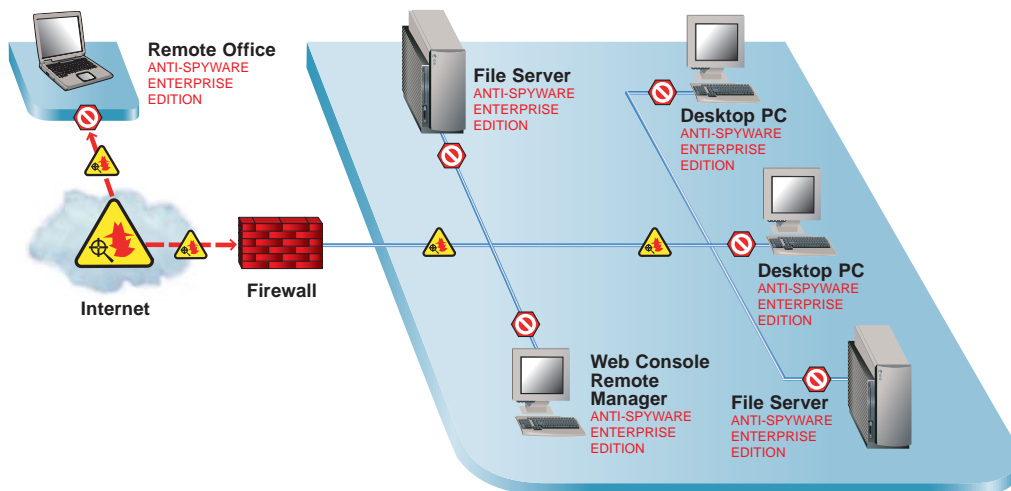

Trend Micro Anti-Spyware Enterprise Edition is a standalone anti-spyware solution that protects client/server environments with superior spyware detection and cleanup supported by true enterprise-class management. It is compatible with major enterprise desktop security products.

Enterprise-Class Protection from Spyware.

Trend Micro Anti-Spyware Enterprise Edition accurately detects spyware and cleans it from systems. It uses an industry-leading, highly efficient spyware database and heuristic rule set to scan clients quickly, with a small footprint. Anti-Spyware Enterprise Edition stops spyware from installing by actively monitoring file downloads. It is the only anti-spyware solution with Trend Micro CWSShredder™ to eradicate the stealthy and difficult-to-remove CoolWebSearch browser hijackers.

Enterprise-Class Management from a Single Server.

Trend Micro Anti-Spyware Enterprise Edition is built on robust client/server architecture with centralized management to ease administration and deployment. All machines can be managed from one enterprise server using the intuitive, Web-based console of Trend Micro Control Manager™.

KEY BENEFITS

- Increases user productivity and system performance, reduces help desk calls**
 Thoroughly cleans spyware from infected systems and prevents new spyware from installing
- Best protection against browser hijackers**
 The only anti-spyware that includes CWSShredder
- Easy-to-manage**
 Centralized management of all clients and servers from one intuitive Web-based console
- Rapid deployment**
 Installs quickly and easily with automatic updates
- Complements existing security**
 Standalone anti-spyware is compatible with any enterprise antivirus product
- 24x7 service from TrendLabs™**
 A global network of five regional security research and support centers

The Best Spyware Protection for Client/Server Environments

Trend Micro Anti-Spyware Enterprise Edition offers large organizations more extensive manageability than other standalone solutions and more effective protection than competitive integrated security solutions.

Trend Micro Anti-Spyware Enterprise Edition

Enterprise-Wide Centralized Management and Deployment

- Trend Micro Control Manager™ enables hierarchical management of multiple enterprise servers from one central server console
- Web-based console allows management from any point on the network
- Scalability: up to 60,000 users per Anti-Spyware Enterprise Edition server and up to 1000 servers per Control Manager network
- Automatic Discovery of client machines for easy deployment
- Transparent push of agents to desktops—no end user intervention
- Deployment via domain mode and Microsoft Installer (MSI)

Client Administration through Web-Based, Enterprise Server Console

- Flexibility: set up one policy for all clients or tailor policies per group, domain, etc.
- Multiple scheduling, updating, scanning, cleaning, and monitoring options per policy
- Custom spyware white lists can be created per policy*
- Email alerts notify administrators when spyware is detected*
- Encrypted communications are sent between console and desktops via HTTPS
- Enhanced log event guidance helps resolve issues quickly

Client Scanning, Cleanup, and Automatic Updates

- Active Monitoring detects spyware in real time to prevent it from installing
- Efficient signature database and advanced heuristic rule set result in highly accurate detection with fast scanning and small client footprint
- Trend Micro CWS shredder eliminates the CoolWebSearch program and its variants
- Patent pending Trickle Scan™ technology throttles back scanning when a client is in use
- Scans and cleans on demand and/or as scheduled. Maintains communications integrity to keep clients online
- Easily restores programs, system settings, and browser settings previously cleaned
- Regular definition updates on clients are invisible to end users
- Efficient, low bandwidth XML network communications between server and clients

Flexible Reporting

- Reporting consolidated for all servers or at the enterprise server level
- Executive-level graphical summaries and detailed reports assist in client monitoring and understanding the prevalence of spyware threats
- Data exports from TMCM via PDF, RTF, and CSV; from enterprise server console via CSV*
- An event log provides a record of all desktop activities including a history of all scans, cleanings, restores, and other system events

* Available in January 2006

System Requirements

Software

Server

- Microsoft™ Windows™ Server 2003: Standard Edition/Enterprise Edition w/o SP, SP1
- Windows 2000: Server/Advanced Server with SP4

Client

- Windows Server 2003: Standard Edition/Enterprise Edition w/o SP, SP1; Web with SP1
- Windows XP: Home/Pro with or w/o SP, SP1, SP2
- Windows 2000: Pro/Server/Advanced Server with SP3, SP4

Hardware

Server

- Up to 12,500 clients; Processor: 2.4GHz or faster; 512 MB, minimum¹
- 12,501 to 25,000 clients; Dual Processor 3.0GHz or faster; 1 GB, minimum¹
- 25,001 to 60,000 clients; Quad Processor 3.4GHz or faster; 2 GB, minimum¹
- Disk space: 5 GB, minimum¹, includes internal database requirements Internet Explorer 5.5 and above¹ includes Apache/MySQL executable requirements

Client

Processor 450 MHz or faster; 128 MB, minimum; 10 MB, minimum

Note: For clients running Windows XP SP2, disable the internal firewall or configure it to allow the required software connections.

Integrated Multi-Layer Security

Trend Micro is the only broad-line security vendor that offers comprehensive, multi-layered anti-spyware security with two options at the desktop: standalone or integrated. Either option — Anti-Spyware Enterprise Edition or OfficeScan™— offer superior ease of deployment and enterprise-class management. Unlike other stand-alone anti-spyware vendors, Trend Micro offers customers investment protection if they choose to migrate to a proven, integrated desktop solution later.

Trend Micro, Inc.

Trend Micro, Inc. is a global leader in network antivirus and Internet content security software and services, focused on helping customers prevent and minimize the impact of network viruses and mixed-threat attacks through its award-winning Trend Micro™ Enterprise Protection Strategy. Trend Micro has worldwide operations and trades stock on the Tokyo Stock Exchange and NASDAQ.
